Directions (1-8): Read the following passage carefully and answer the questions given below it. Certain parts are given in bold to answer some of the questions based on the passage.

We all are aware of the fact that nothing is permanent in this world, neither products nor technology. As day by day, improvements and updations are made in technology, leading to new inventions and innovations in every sphere of life. Invention refers to the creation of a brand new product or device. Conversely, innovation is an act of making changes to the existing product or the process by introducing new ways or ideas. At first sight, the two terms sound alike, but if you dig deeper, you will find that there is a fine line of difference between invention and innovation that lies in their connotations. While invention is all about creating or designing something, innovation is the process of turning a creative idea into reality.

[A] There is often a fine line between genius and insanity. Innovation is not only important on the individual level, but can make or break a business as well.

Innovative businesses create dynamic products, adjust existing services, and/or implement new ideas. **[B] They are not afraid to color outside the lines and try something new, even if it is risky.** If a business is not innovative, they risk losing work to competitors. Lack of innovation also has indirect results such as losing staff and decreasing engagement. Therefore, innovation cannot be an afterthought, but rather a crucial element that is included in part of your strategy. It should be a cultural outlook that impacts thinking and improves problem solving. Many successful companies attribute their success to their innovative practices. That said, inventing and innovation are not one in the same. Invention focuses on creating new items or new ways to produce existing items. Very often, invention is a result of innovation, but it is not a requirement. Although invention can be beneficial to a business, the level of importance and necessity can vary according to the industry.

[C] The era of invention is not over, but they have definitely been pushed aside for an era of innovation. While many people are still out there trying to come up with the next “big invention” that is going to improve humanity, businesses have discovered that innovation seems to not only trump invention in furthering a company’s brand and profitability, but it can be far cheaper when all the framework is already completed. This can be seen from many major businesses that choose to innovate rather than invent, such as Apple and Sony. First, we must distinguish the difference between invention and innovation. Invention is the creation of a product or introduction of a new process, for example the Alternating Current induction motor is an invention created in 1888. An innovation occurs when someone improves on or makes a significant contribution to an item or process that has already been invented; the Apple iPhone is an innovation of the cell phone. It seems that great inventors are smaller in number – perhaps business models are leaning towards enabling innovation.

Sony’s influence in the technology market started with the invention of the first tape recorder, and through years of creativity and perseverance, became innovators of a variety of categories, from computing and electronics to entertainment. Sony shows corporations that for a business to thrive in today’s market, a company cannot stay stagnant with on particular item – innovations are essential.

Innovation drives economic growth. Five combination patterns are what create innovation. These are, the production of a new good, a new method of production, a new market, acquiring a new source of raw minerals and the emergence of a new organization. **[D] A company does not need to invent to have a competitive edge in the market, but need to innovate and create a product that is based on the needs and desires of the consumer.**

- (c) Competition
- (d) Customer satisfaction
- (e) None of these

Directions (9-15): Read the following passage carefully and answer the questions given below it. **Certain words are given in bold to help you locate them while answering some of the questions.**

Compounding the **woes** for the solar power industry, Maharashtra’s appellate authority for advance ruling (AAAR) has held that solar power projects are liable to 18% goods and services tax (GST) and not at the lower rate of 5% as claimed by power producers. With the appellate authority reinforcing similar rulings by some other state level authority for advance ruling including of Rajasthan and Maharashtra, this issue seems to be headed for a **prolonged** legal battle unless the government decides to step in and issue clarifications on the taxability of solar power projects. **[A] A rise in project cost could get reflected in the power tariffs that solar power developers offer in auctions to win projects.** With electricity out of the goods and services tax (GST), the higher tax rate becomes an outright cost for the producers thus inflating the final price of the solar power. A government proposal to levy safeguard duty on imported solar panels that is meant to support domestic panel manufacturers is another factor that has brought some uncertainty to solar power project developers.

Solar power generation panels, which constitute around 60-70% of the cost of the solar power projects, are taxed at 5% GST. However, the AAARs have held that setting up of solar projects are covered under the classification of works contract as they consist of supply of goods and services packaged into an immovable property. They held that because of this, these projects are **liable** to be taxed at 18% that applies to works contracts. In the pre-GST era, only a small part of the total project cost, nearly a tenth of it, was covered by a service tax of 15%. The net tax effect on the solar power industry in a pre-GST regime was less than 5%, a reflection of the tax breaks it enjoyed across excise and value added tax.

The higher tax rates being levied on solar power projects is despite the NDA government's focused approach to promote solar power. The industry has sought government intervention to lower the tax burden on such projects.

[B] The solar industry may be about to face what imported coal-based power projects saw some years back --- an increase in production cost due to changes in law and the imposition of new tariffs.

Due to a safeguards duty recently announced by the government, close to 7,000 MW of under-construction and recently bid solar projects will see their cost go up and would have to revise their tariff accordingly. Over the years, coal power projects have seen massive fluctuations in price and availability of coal. This led to high litigation cost and increase in the power rate, landing several projects in debt trap. Industry executives fear that the same could happen in the solar sector if there is no stability on tariff and clarity on regulations. "A general consensus among various GST advance ruling authorities of 18% rate of GST on solar power projects is quite an aspect of worry for the solar industry players who believe that a 5% tax should be applicable," said Abhishek Jain, tax partner, EY. "To end **apprehensions**, the government should consider issuing an explicit clarification on the rate of tax applicable to such projects," he said. India is pursuing a goal of having 100 giga watt (GW) of solar power capacity by 2022, up from 23 GW at present. India has a renewable power generation capacity of over 70 GW currently, half of which comes from wind power. Intense competition in recent years have drove down solar power tariff discovered in project auctions. The factors that helped producers to bid projects aggressively include lower price of imported solar panels and efficient financial structuring of projects. Industry observers said that global developments like China limiting solar capacity addition making more panels available for imports are helping to counter-balance cost pressures building up in the country. "The solar industry is facing upward cost pressure locally from taxes and financing, but that is getting balanced by lower equipment costs due to global developments. So, for now, project profitability is secure," said Kameswara Rao, Partner, Grid, PwC India.

Q9. Why does the solar power project issue seems to be heading for a prolonged legal battle?

- (a) Because intense competition in recent years have drove down solar power tariff.
- (b) As India is pursuing a goal of having 100 giga watt (GW) of solar power capacity by 2022 and it is not getting enough support to do so.
- (c) As AAAR's has held that solar power projects are liable to 18% goods and services tax (GST) and not at the lower rate of 5%.
- (d) Since the government has issued explicit clarifications on the rate of tax applicable to solar projects.
- (e) All of these.

Q10. What is the factor among the given options that has brought uncertainty to solar power project developers?

- (a) Lower equipment costs due to global developments.
- (b) Unsecure project profitability of solar power projects.
- (c) Lowering down of solar power capacity from 23 GW.
- (d) Government's proposal to levy safeguard duty on imported solar panels.
- (e) High litigation cost.

Q11. How have AAAR's justified the liability of solar power projects withstanding under 18 % GST?

- (a) As under the previous regime, there were issues in tax treatment of works contract.
- (b) As an abatement has been prescribed for works contract under the GST law.
- (c) Setting up of solar projects are covered under the classification of works contract as they consist of supply of goods and services packaged into an immovable property.
- (d) Both (b) and (c)
- (e) Both (a) and (b)

Q12. What was the consequence of massive fluctuations in price and availability of coal?

- (a) As coal is not easier to transport than oil or natural gas, the mining industry got impacted.
- (b) Cost of extracting coal decreased.
- (c) Decreased economic activity and demand for steel.
- (d) High litigation cost and increase in the power rate.
- (e) None of these.

Q13. What are the factors highlighted that helped solar power producers in aggressive bidding?

- (a) Lower cost pressure from taxes and financing.
- (b) Lower price of imported solar panels and efficient financial structuring of projects.
- (c) Safeguards duty embedded in the imported solar panels helped solar power project developers.
- (d) Dis-balance in equipment costs due to global developments.
- (e) 5% tax reflection effect that it enjoyed across excise and value added tax.

Q14. Statement [A]: "A rise in project cost could get reflected in the power tariffs that solar power developers offer in auctions to win projects" in the passage may not be grammatically or contextually correct. Choose the most suitable alternative that will replace the statement to adhere to the grammatical syntax of the paragraph.

- (a) A rise for project cost could get reflected in the power tariffs that solar power developers offer in auctions to win projects.
- (b) A rise with the project cost could get reflected in the power tariffs that solar power developers offer in auctions to win projects.
- (c) A rise with the project cost could reflects in the power tariffs that solar power developers offer in auctions to win projects.
- (d) A rise for the project cost could get reflected on the power tariffs that solar power developers offer in auctions for winning projects.
- (e) None of these

Q15. Which of the following options is strengthening the statement [B] **“The solar industry may be about to face what imported coal-based power projects saw some years back --- an increase in the production cost due to changes in law and the imposition of new tariffs.”** of the passage?

- (a) The tariff and litigation cost are highly instable in solar industry.
- (b) High litigation cost and increase in the power rate, landed several coal power projects in debt trap.
- (c) Electricity cost is not covered under GST, therefore the project costs increases.
- (d) India is pursuing a goal of having 100 giga watt of solar power capacity.
- (e) None of these
